

Model aSENSE [™] m III Integrated CO / CO₂ sensor & ventilation controller

PRODUCT DESRIPTION

aSENSE™ m III is a controller with built-in sensors to monitor at the same time carbon dioxide and carbon monoxide. With these parameters, the programmable unit can control, for example, ventilation rates, and generate alarm signals for personal safety devices.

aSENSE™ m III is designed for both standalone operation, as well as being connected to larger building automation systems.

FEATURES

- State-of-the-art infrared (NDIR) technology to measure carbon dioxide gas
- State-of-the-art hybrid thick film sensor (MMOS) technology to measure carbon monoxide gas.
- Flexible control outputs for connection to DDC, or direct control of dampers and speed regulated fans
- Contributes to lower energy costs when applied in Demand Controlled Ventilation
- Internal data recorder for environmental trend logging
- Serial com port for connection to PC, GSMmodule or local network
- Maintenance free more than 5 years

APPLICATIONS

The $aSENSE^{TM}$ m III is applicable in most large spaces where combustion is the source of the potential toxic danger, such as in public garages, truck terminals, tunnels and mines. It offers the possibility to combine CO and CO_2 measurements which not just guarantees public safety, but also saves energy when applied to Demand Controlled Ventilation.

The aSENSETM m III offers the possibility to regulate ventilation systems stand-alone, as well as being just a sensor in a larger system. To cover larger spaces, several sensors could be joined in a simple relay loop and together control an intermittent two-speed exhaust fan, for example. The sensors can also be connected together in a MODBUS RS485 network (optional) for serial communication to a global control system or to a simple webb Gateway for data presentation on the internet.

All engines generate CO and we need protection against this toxic gas. What we do not seem to realize is that a warm, modern engine with catalytic exhaust system typically generates 140 times more CO₂ than CO, in which case the CO₂ constitutes the potential threat. This fact forces us to measure both gases to be able to guarantee personal safety.

FUNCTIONAL DESCRIPTION

aSENSE™ m III is delivered pre-programmed (see description below). With the free software UIP4.3 (or later versions) and SenseAir's standard communication cable for PC (art.no. A232 Cable) the user can adjust the product to his/hers application by, for example, changing the measurement ranges of the linear outputs, modify the set points of the alarm outputs, invert outputs and also reconfigure the functions and the logic that controls the outputs.

Functions (default)

www.senseair.com

OUT1 = CO-transmitter, 0/2..10 VDC or 0/4...20 mA for 0...100 ppm CO, for DDC connection. Position of jumper determines current or voltage

common for output 1 and output 2.

OUT2 = CO₂ transmitter, 0/2...10

VDC or 0/4...20 mA for 0...2000

ppm CO₂, for DDC connection.

output mode. Start point jumper for

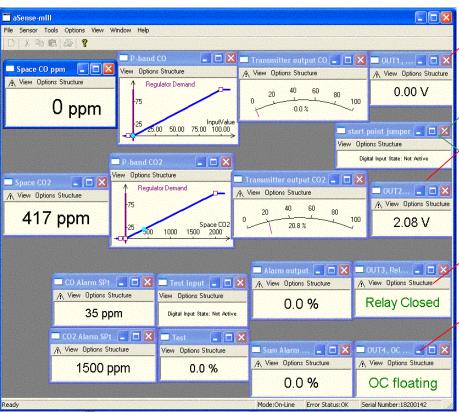

0-100% or 20-100% signal is

Position of jumper determines current or voltage output mode. Start point jumper for 0-100% or 20-100% signal is common for output 1 and output 2.

 OUT3 = Gas alarm relay
 (Normally Closed) OFF/ON (with hysteresis) for...35/30 ppm CO OR...1500/1400 ppm CO₂

• OUT4 = Sum alarm (Normally Open) ON/OFF (with hysteresis) for... 35/30 ppm CO OR...1500/1400 ppm CO₂, OR...not ready (15 min delay@cold

OR...error (discovered by the internal diagnostics)

Print screen of UIP4.3 PC work space of **aSENSE** will where the pre set functions can easily be redefined. The four outputs (far right) are here arranged in rows together with the function blocks that controls the output.

Internal CO and CO₂ recorder samples data continuously every 20 minutes. After 13 days and 8 hours the storage memory is full and the oldest data are eventually overwritten one by one. The other values can be studied with the software UIP4.3 and exported to a text file for further treatment in e.g. MS-EXCEL

aSENSE[™] m III CO / CO₂ sensor & ventilation controller Technical Specification * (rev 080228)

General Performance

Compliance withEMC directive 89/336/EEC

Operating Temperature Range 1...... 0 to +50 °C

Storage Temperature Range-20 to +70 °C
Operating Humidity Range 0 to 95% RH (non-condensing)

Warm-up Time≤ 15 minutes (more when un-powered for a long time)

Step response (T_{1/e}) 8 minutes ² Expected Life Time > 5 years ²

Self Diagnostics complete function check of the sensor

Status LED Indicators yellow = maintenance support, green = relay closed,

red = active open collector output

Display4 Digits, 7 segments LCD with ppm indicator

Pushbuttons offer a selection of set point adjusts and calibration operation functions

Data loggerinternal data logger of CO and CO₂ readings, 2 x 960 samples, corresponding to just under 2 weeks data sampling of CO- and CO₂-values in 20 minutes intervals

Housing Options

DUCT MOUNT: with and without display

Protection class: IP65

Electrical/Mechanical/Dimensions

Power Input24 VAC/VDC±20%, 50-60 Hz (half-wave rectifier input)

Power Consumption ≤ 3 Watts average

Wiring Connectionsmax 1,5 mm² wires for screw terminal (main terminal) and spring loaded terminal

For duct mounted –K sampling probe 245 x 40 mm (L x diameter of hole)

CO₂ Measurement

.....±1% of measurement range ± 5 % of measured value

Pressure Dependence+ 1.6 % reading per kPa deviation from normal pressure, 100 kPa

CO Measurement

Operating PrincipleFuel type electrochemical gas sensor with compensation for temperature

.....± 10 ppm

Measurement range 0 to 100 ppm (standard)

Extended measurement ranges 100 to 500 ppm Accuracy in extended range⁴±20% of reading

Not 1: Lower temperature operation range can be reached by adding a box heater assembly.

Not 2: Is limited by the CO probe. More information in SenseAir's Technical note TN-012 (www.senseair.com).

The ABC-function is the key to maintenance free operation. It assumes normal operation applications, where Not 3: ventilation to some degree will occur (at least during some moment over a week period). This function automatically corrects for any possible zero drifts for the CO₂ and the CO sensors.

Not 4: In normal ventilated environments. Accuracy is defined at continuous operation (3 weeks minimum after installation)

Please Note! The CO probe also responds to some other chemicals than CO, i.e. silicon. Some non-common operation environments therefore may not be applicable for this product!

Outputs / Terminals

No.	Label	Electrical connection	Function (may be configured with UIP4)
	Main terminal	Screw terminal	
1	G+	24 V AC/DC	
2	G0	Power ground	
3	OUT1	Linear signal (+) 10V/20mA	CO-transmitter. 0100 ppm
4	OUT2	Linear signal (+) 10V/20mA	CO ₂ -transmitter. 02000 ppm
5	M	Signal ground (-)	
6 7	OUT3	OFF/ON-relay (N.C.)	Gas alarm CO = $35/30 \text{ ppm}$ or $CO_2 = 1500/1400 \text{ ppm}$
8	OUT4	open-collector (N.O.) or control signal (+)	Operation disturbance alarm or Gas alarm (OUT3-relay closed)
	Extra terminal	Spring-loaded terminal	
9 10	DI 1	Switch with delay timer	Test function (N.O.)

Analogue outputs ⁵					
Protection	PTC fuse (auto reset) on signal return M, short-circuit safe				
Output limits	MIN & MAX limits may be individual	ly set to all outputs			
Linear outputs OUT1 & OUT2	0/2-10 VDC ROUT < 100 OHM, Rload >	> 5k OHM			
	0/4-20 mA R _{load} < 500 OHM				
Linear output OUT4	0-10 VDC ROUT < 100 OHM, Rload > 5	5k OHM			
D/A Resolution	·				
D/A Conversion Accuracy	voltage mode: ± 2% of reading ± 50 mV				
,	current loop: ± 2% of reading ± 0.3 mA				
ON/OFF					
Relay (OUT3)					
Open collector OUT4	in ON/OFF mode: max 0.5A/55VDC	C (half-wave rectifier for AC), closed to ground			
UART Serial com port					
Protocol	MODBUS .SenseAir protocol ⁶ (see o	comprot 0800xx rev 1 051.pdf)			
PC-interface					
PC User Interface Program	UIP version 4.3 (or higher) for reconfiguration, maintenance and reading of				
ŭ	internal data logger				
RS485 network com	(accessory -485) RS485 PCB mounted onto the UART terminal, network				
	capabilities up to 30 units.				
Visual signals		<u>Default @ delivery</u>			
Green LED	Relay output (OUT3) active	= gas levels below alarm limits			
Red LED	Open-collector output (OUT4) active = operation alarm or gas alarm activated				
Yellow LED	Operation error indication	= lit by error status			

Note 5: The specifications are valid for outputs connected to power ground G0 or the common signal ground M.
